

## Lesson Plan 5 Outline

### Objectives:

- Students will practice using event handling.
- Students will practice making their own methods.
- Students will create their own storylines through the use of storyboards.

### Talking points:

1. Show students my original animation, the original storyboard, and then my final animation.
2. Give students time (~15 minutes) to come up with their storyboards.
3. Students will spend the rest of the time creating their own stories.
4. At the end of the last session, have students demonstrate their worlds to the class. (Note: All students are to be away from the computers at this point so their attention is on the demonstration.)
